

Stereotactic Clinical Case Requirements Overview

Original Stereotactic Certification requires two clinical case submissions that must include all of the following.

3D Cases are not permitted.

Images

Malignancy invasive or in situ, or atypical ductal hyperplasia <i>(at least one of the 2 cases)</i>
Initial scout view, clearly showing the target lesion
Stereotactic pair, demonstrating the lesion in the standard 15% offset views
Stereotactic pair with the biopsy device in the pre-fire position, if applicable
Stereotactic pair showing the biopsy device in the post-fire position
Specimen radiograph, if applicable
Stereotactic pair or post-procedure mammogram showing appropriate placement of the biopsy marker
Pre-biopsy mammogram images; MLO, CC views as well as magnification views

Documentation

Performed and documented breast exam
Procedure performed
Right or left breast
Location of lesion
Approach used to target and biopsy lesion
Prep
Local anesthetic
Type of biopsy device used
Result of specimen radiograph, if applicable
Marker placement, if any

*Stereotactic Recertification requires one invasive, in situ or atypical ductal hyperplasia case submission including all above items.
